

C-Pol and Lightning Data

Peter May and Hartmut Hoeller

BMRC

DLR

Polarimetric radar

Type of weather radar

Change polarisation between pulses:

Measures: Reflectivity

Differential Reflectivity - oblateness

Correlation between signals - mixed phase

Differential phase on propagation -
attenuation
rain rates

Applications – QPE, Hydrology, Storm microphysics

Scan Strategy every 10 minutes

- 1) Long range low elevation scan
- 2) 17 tilt Volume scan up to 45° , range 150 km
- 3) RHI Scan over ARCS, Profiler sites (high vertical resolution)
- 4) Vertical mode

From 2 derive:

Gridded reflectivity and microphysical type product

Rainfall maps

Data Sets

“raw data” – Z , Z_{DR} , Φ_{DP} , $\rho_{HV}(0)$, V , σ , $[K_{DP}]$

300 m resolution

Aliasing issues – high speeds and special case
for high rainfall

Volumes and vertical scan available on request

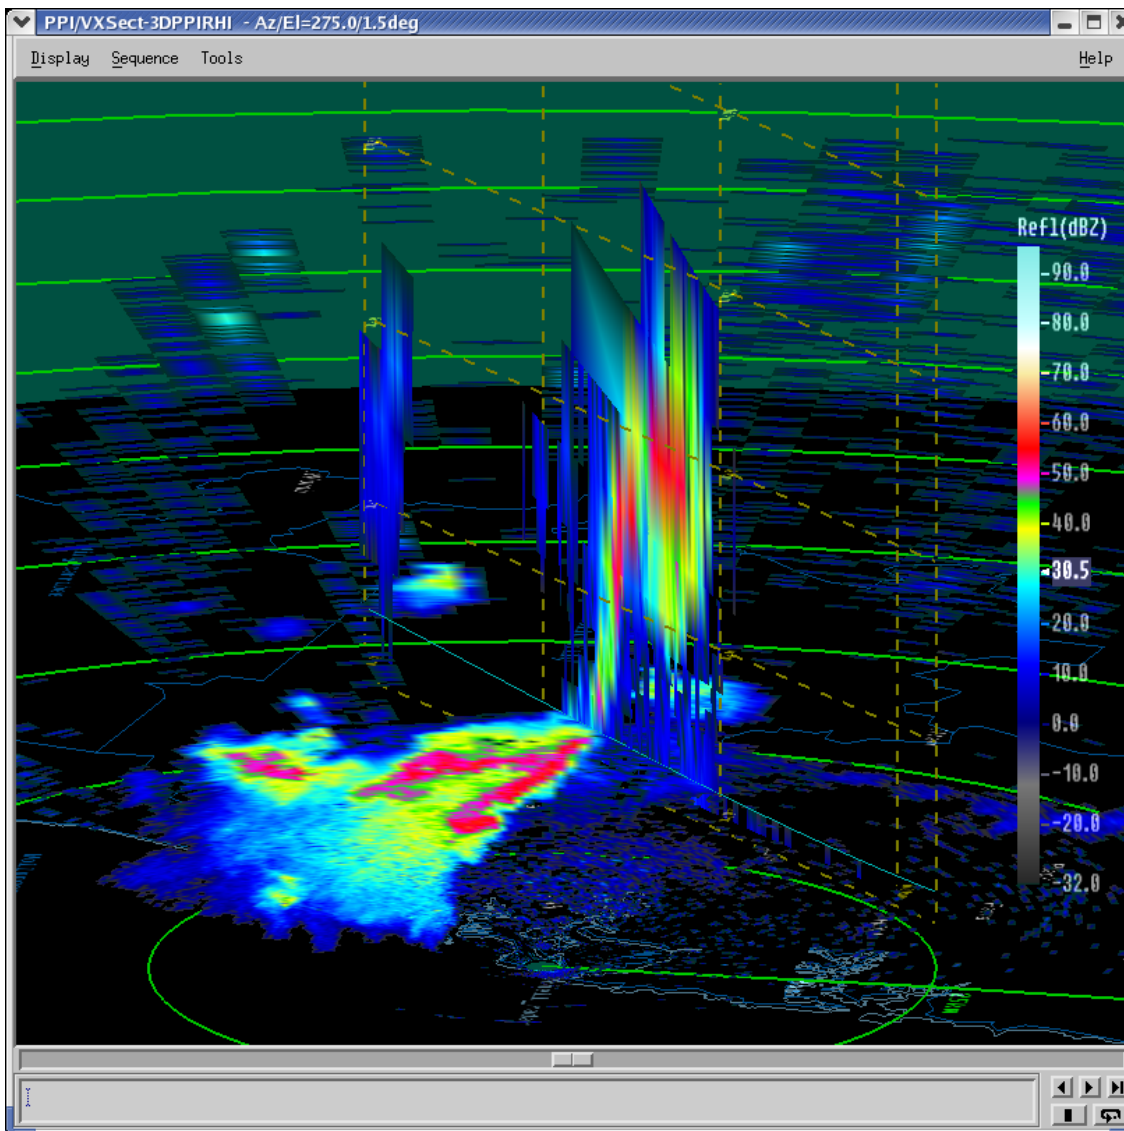

Gridded data sets

2.5 km horizontal grid, Z , microphysical type

Available, being reprocessed at present

Rainfall (10 min, hourly)

New: Area statistics

Visualisation

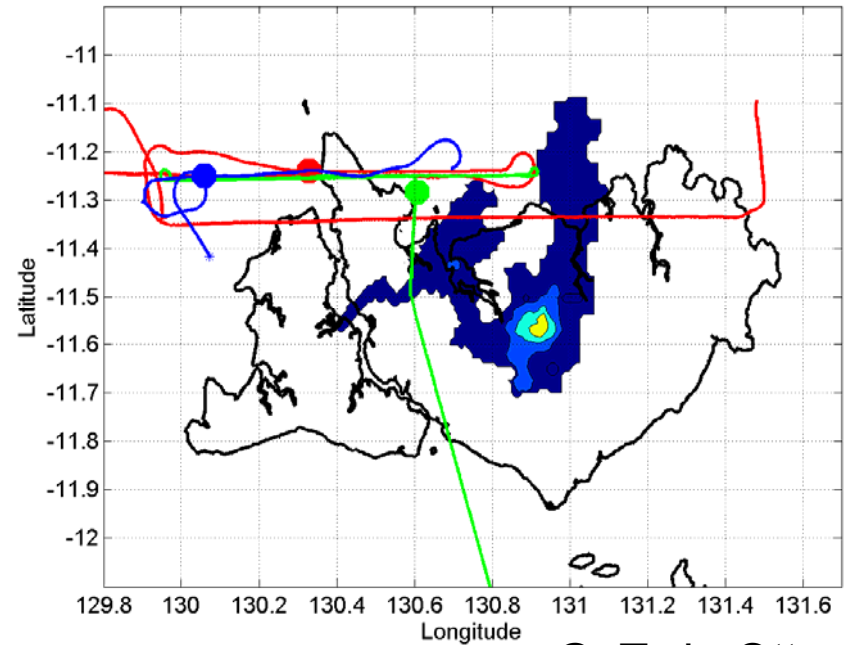

3DRAPIC

OVERLAYS INCLUDING AIRCRAFT LOCATIONS, TRACKS, Z, v_r , VIL, Rainrate

Applications 1: rain estimation

Rain maps (with overlay of aircraft tracks)

750 UTC on 6/2/2006

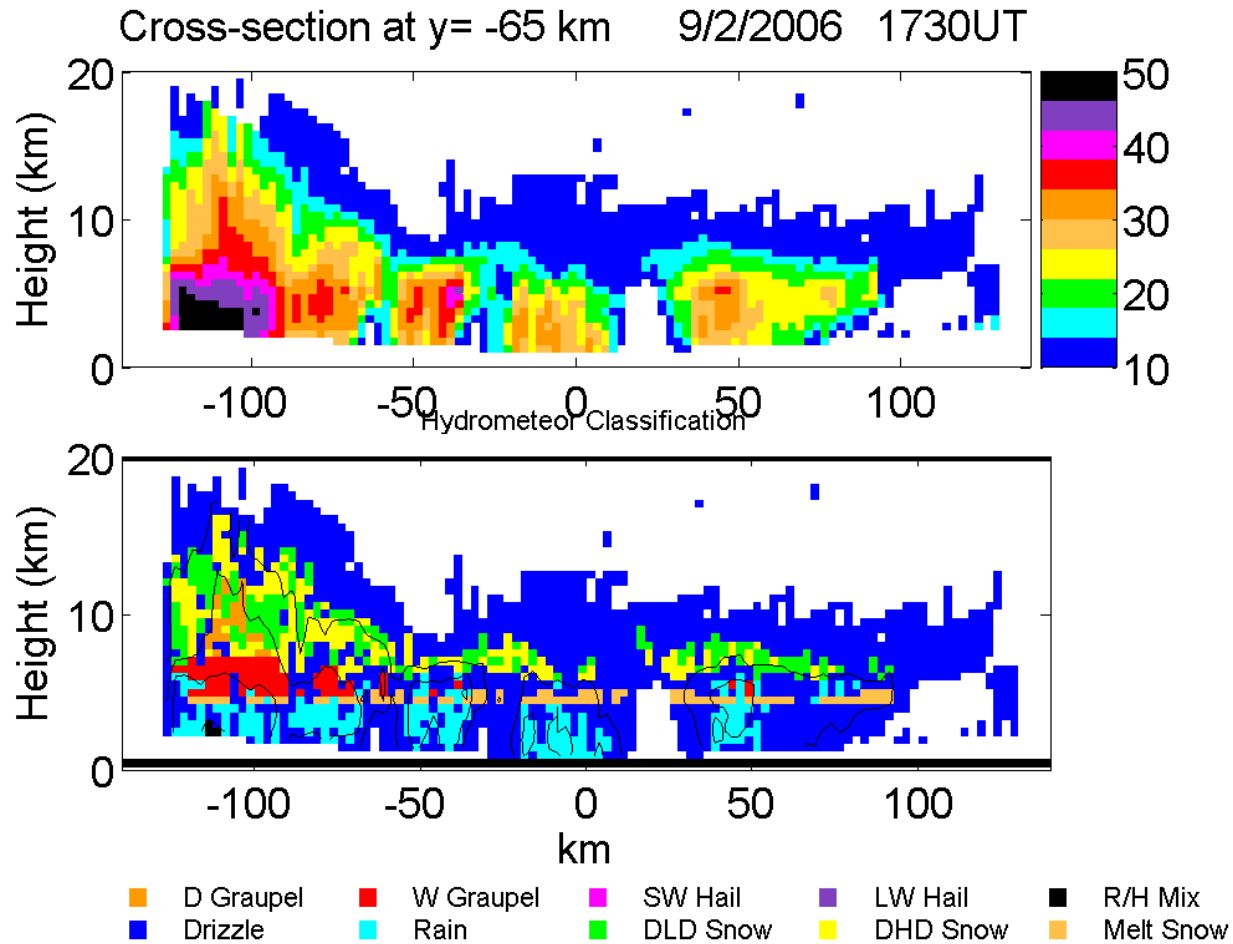

G: Twin Otter
B: Proteus
R: Egrett

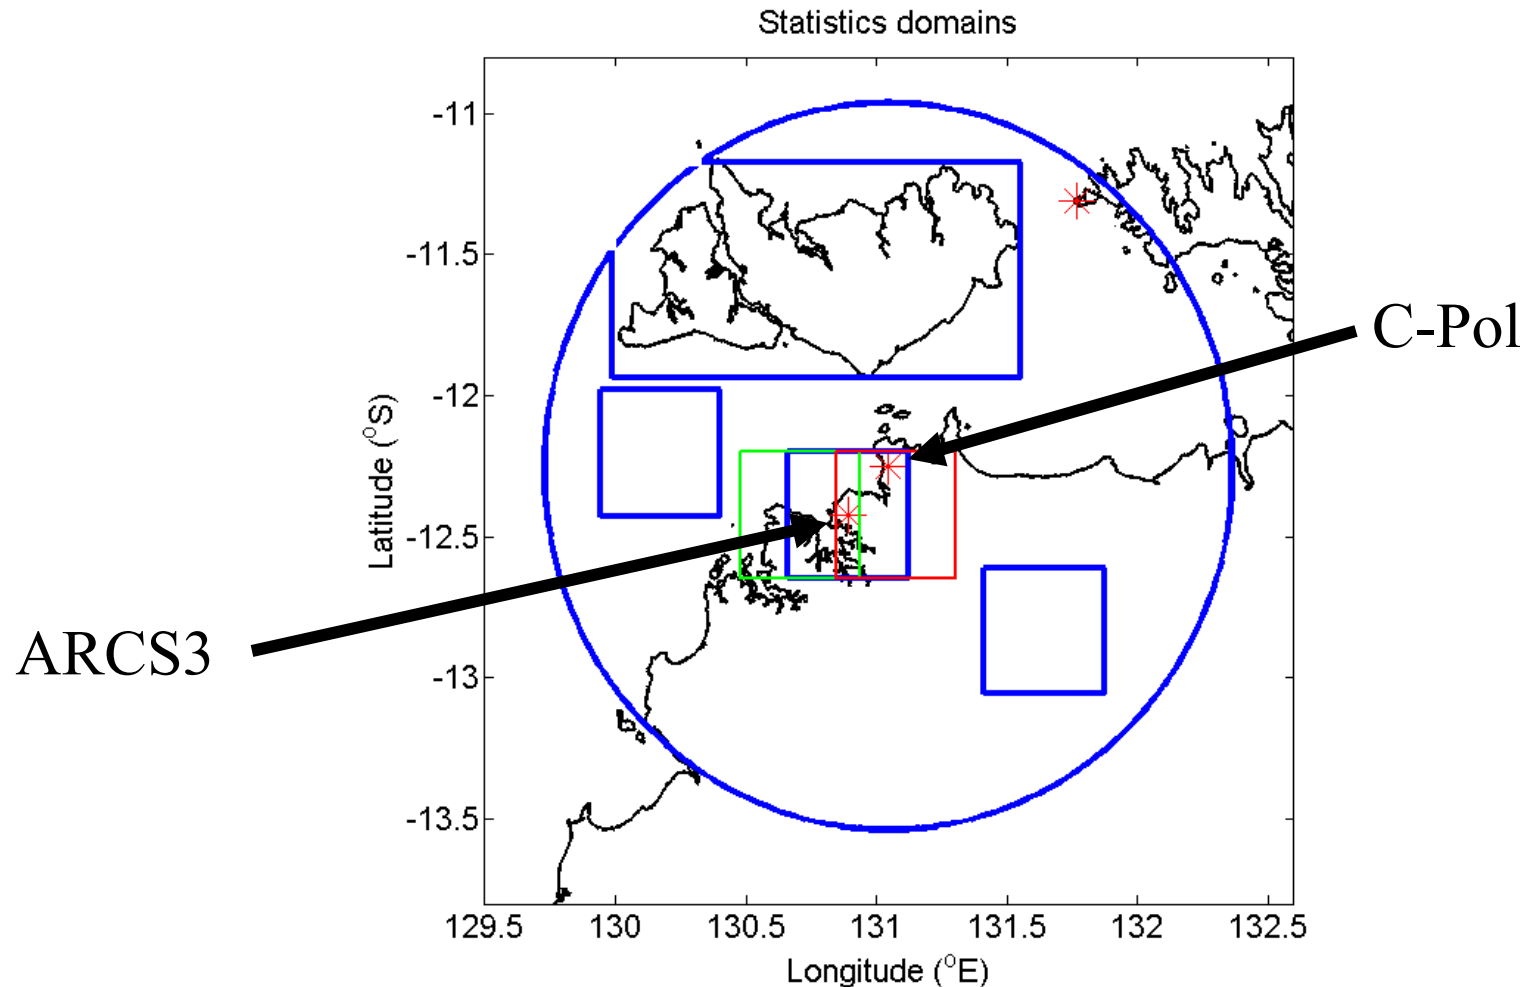

Seasonal and diurnal variations
This is for the break and build up periods.

Cross-section of gridded microphysical data

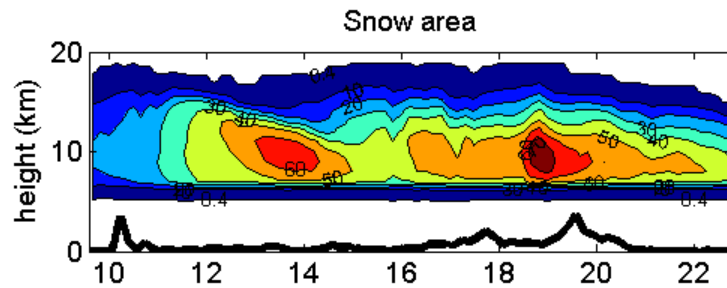

New Products – Statistical summaries for regions

Taking grids and calculating areal statistics as a function of height and time, e.g. area $Z > 10$ dBZ, snow area etc
Metrics of cloud cover, convective activity ...

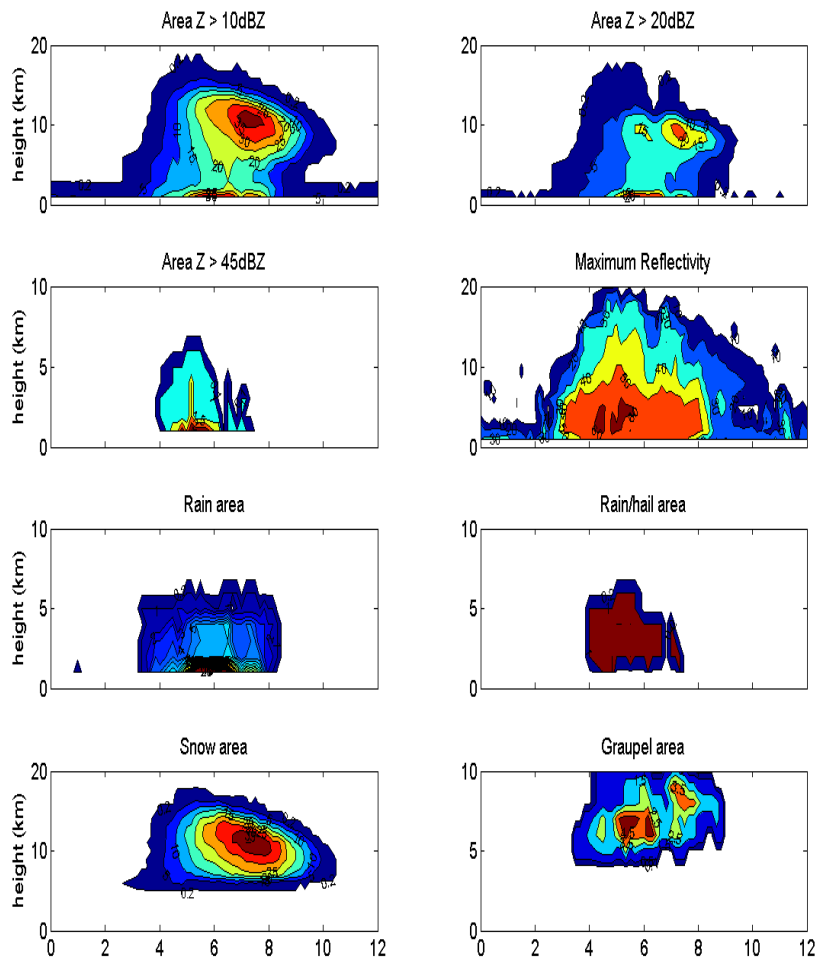

Example MCS – has been reprocessed because of impact of short soundings

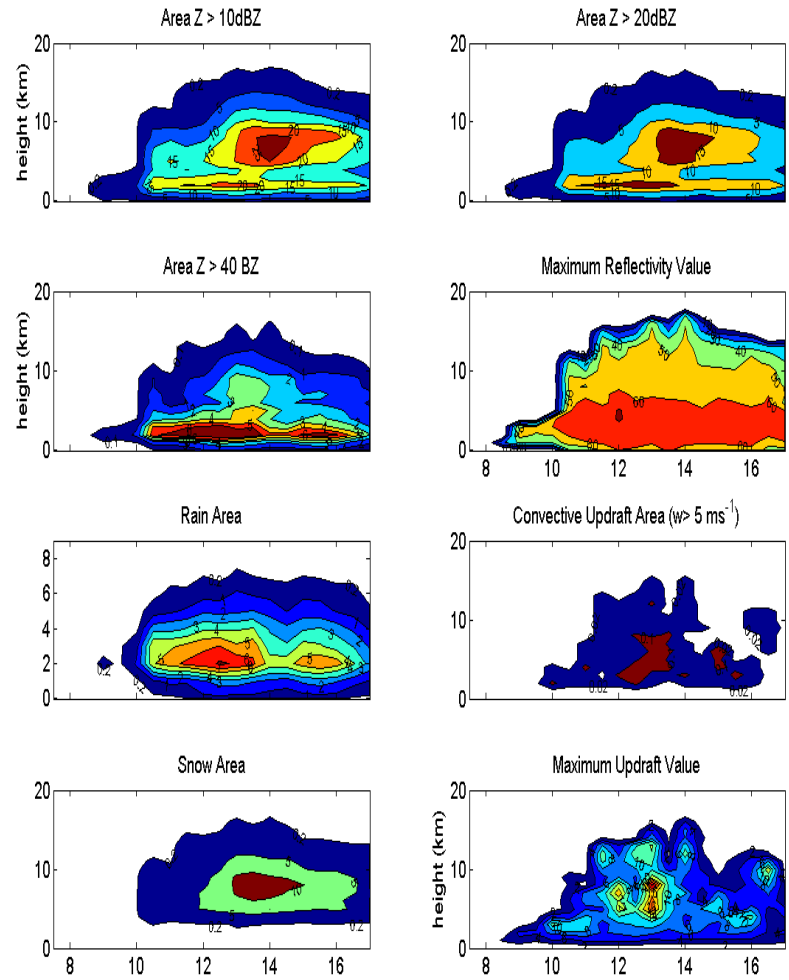

Applications 5: Model validation

Observations over Tiwi Is Nov 30, 2005

Time UTC

Todd Lane CRM of Hector

Local Time (UTC+9.5)

Lightning data from DLR Network

Cases available from Hartmut Hoeller

Location (3D)

Cloud-ground or cloud-cloud

Polarity

Current

Plans for availability?

Proxy for intensity, updraft strength

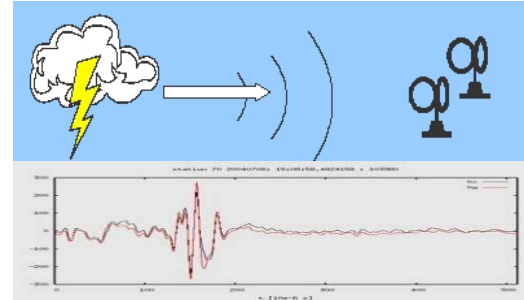

The LINET system

- LINET is a 6 station network for VLF/LF lightning detection
 - magnetic antenna
 - GPS antenna
 - PC for data recording
 - real time operation
- constructed by LMU, Sferics Research Group, Betz et al.
- Operation and data evaluation cooperation DLR - LMU
- since 2003 operational in S-Germany
- in 2005 deployed for field experiments

LINET System Characteristics

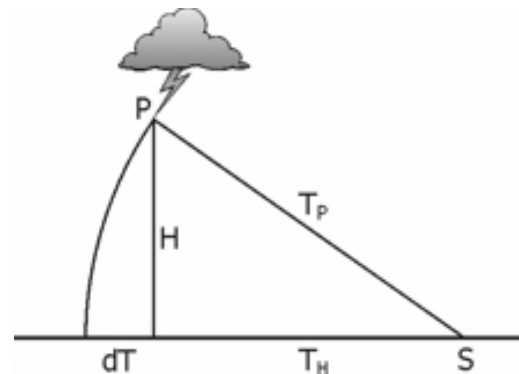

- Measurement of magnetic field
 - no dead time
 - no signals rejected

- TOA Method for lightning location

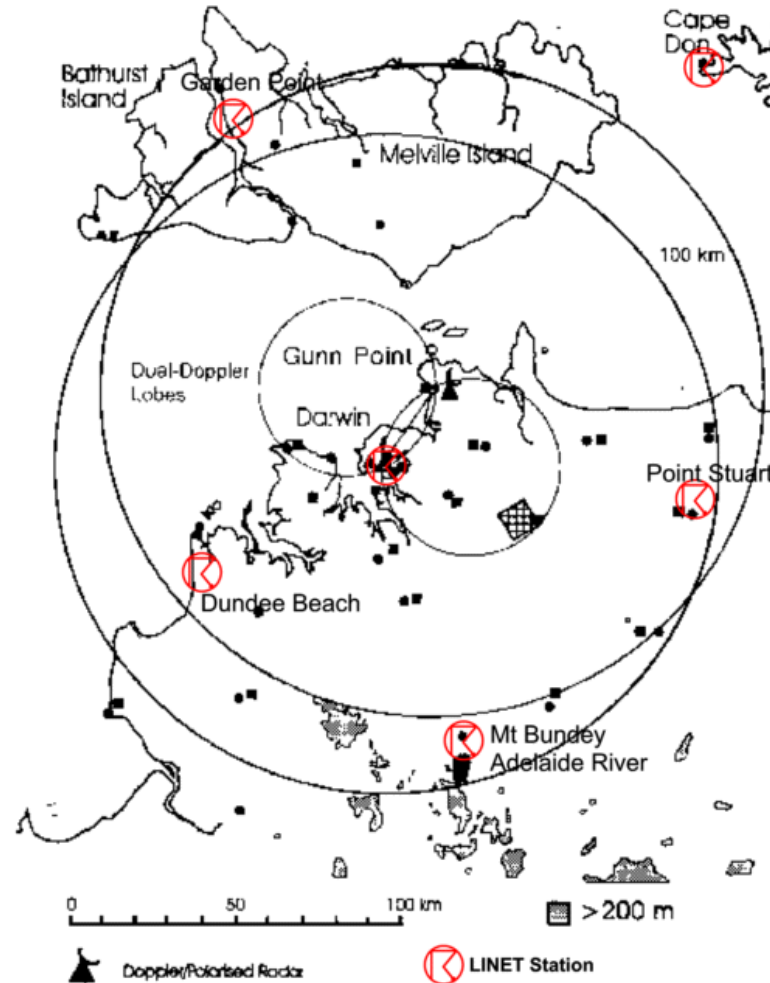

- IC - CG discrimination
- Height of IC events

Network Configuration Nov 05 - Feb 06

BoM C-POL
and Berrimah
radar

DLR LINET
lightning
detection

C-POL and LINET sites SCOUT-O3 in Australia 2005

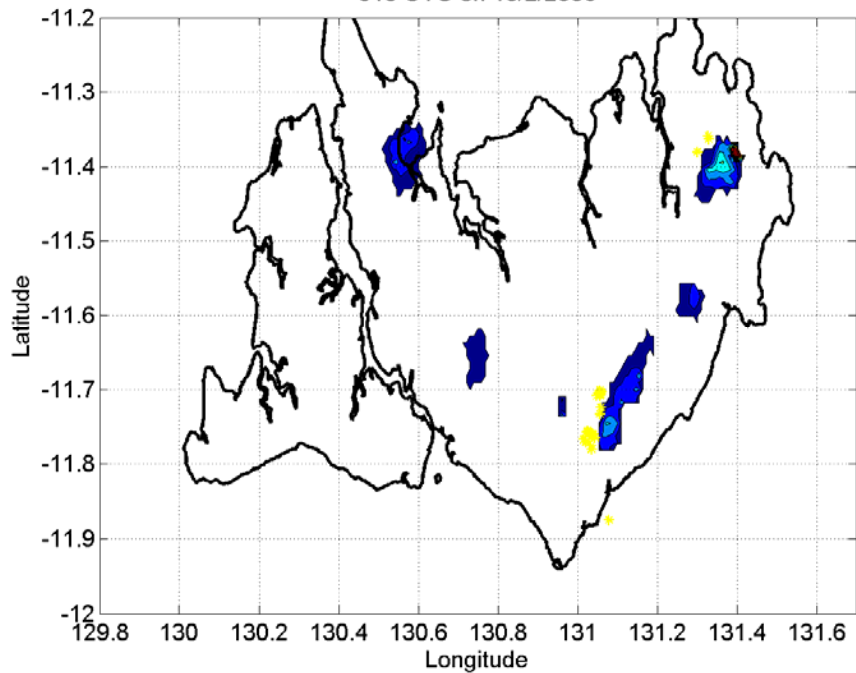

- C-POL at Gunn Point

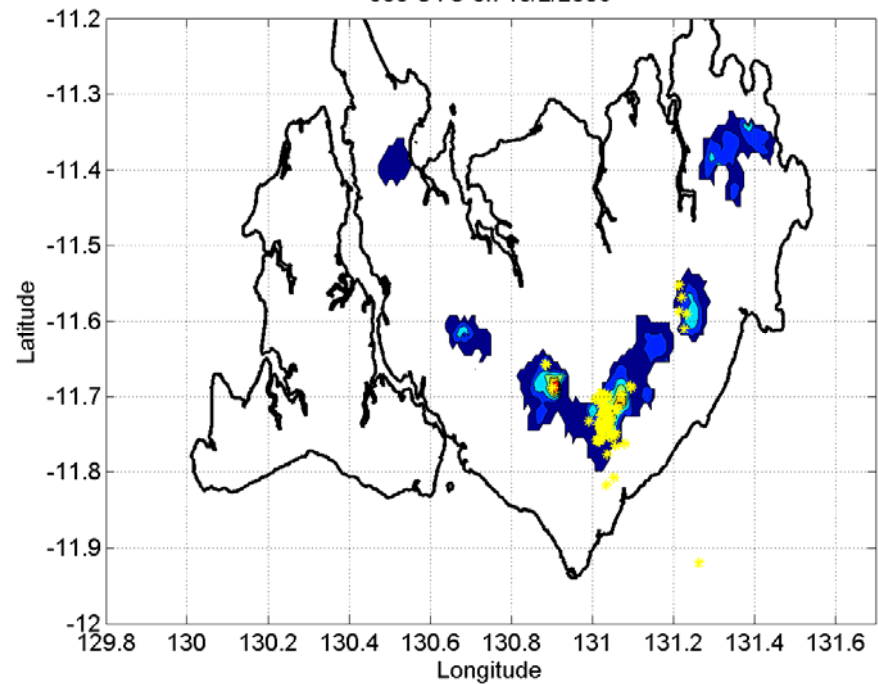

- LINET station at Darwin

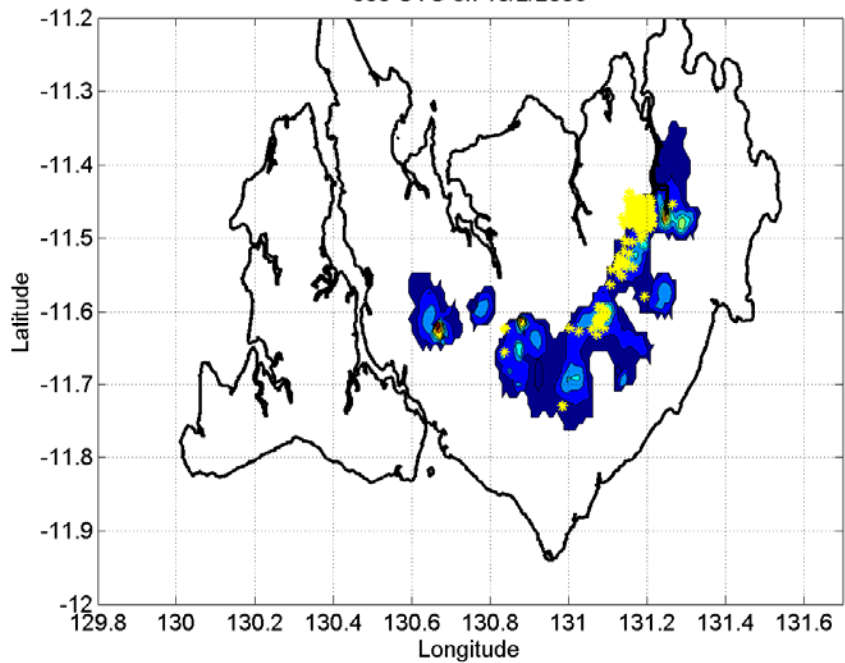

510 UTC on 10/2/2006

530 UTC on 10/2/2006

550 UTC on 10/2/2006

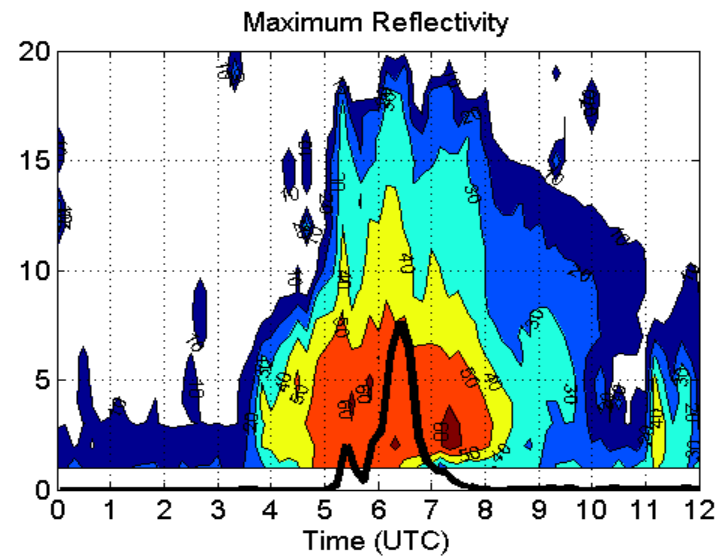

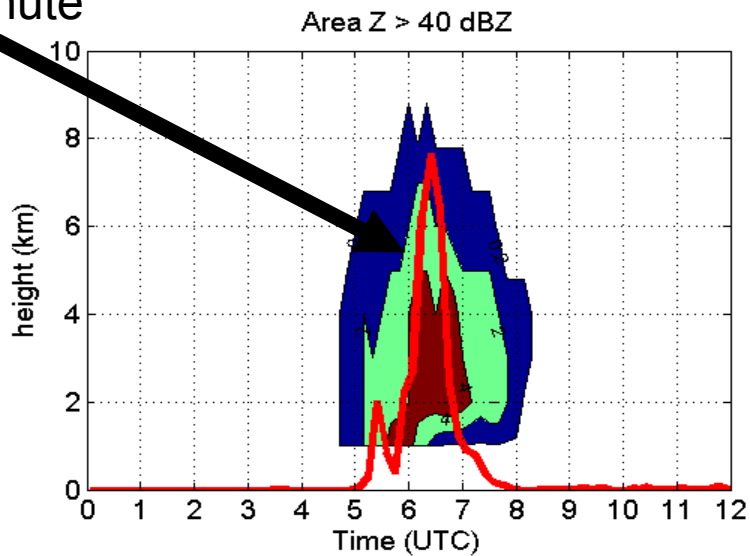

610 UTC on 10/2/2006

Time series of fractional coverage and lightning

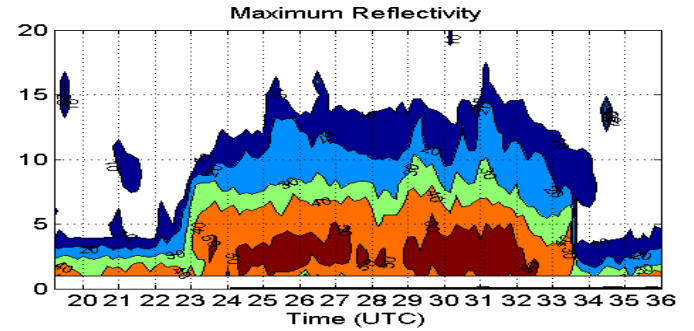

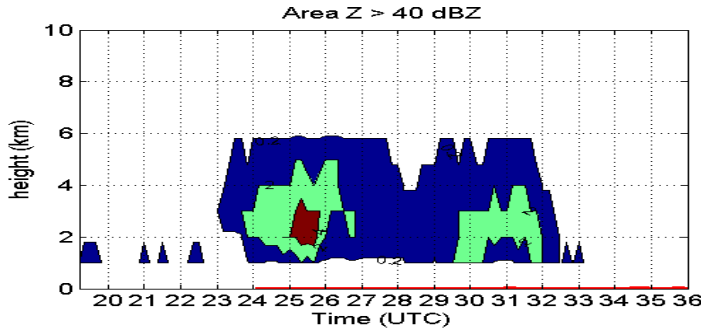

#strokes
per minute

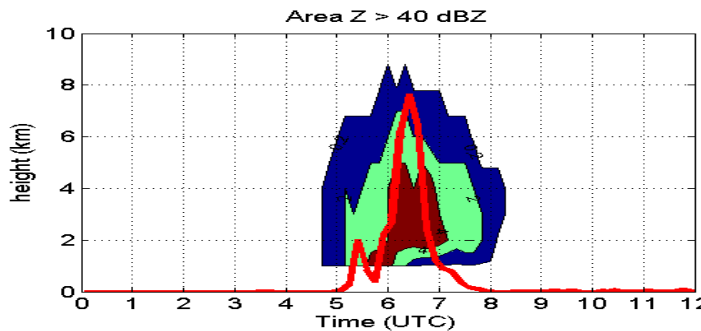

(multiply by 10 for strokes rate/min so max is about 78 flashes/minute for 10 min average)

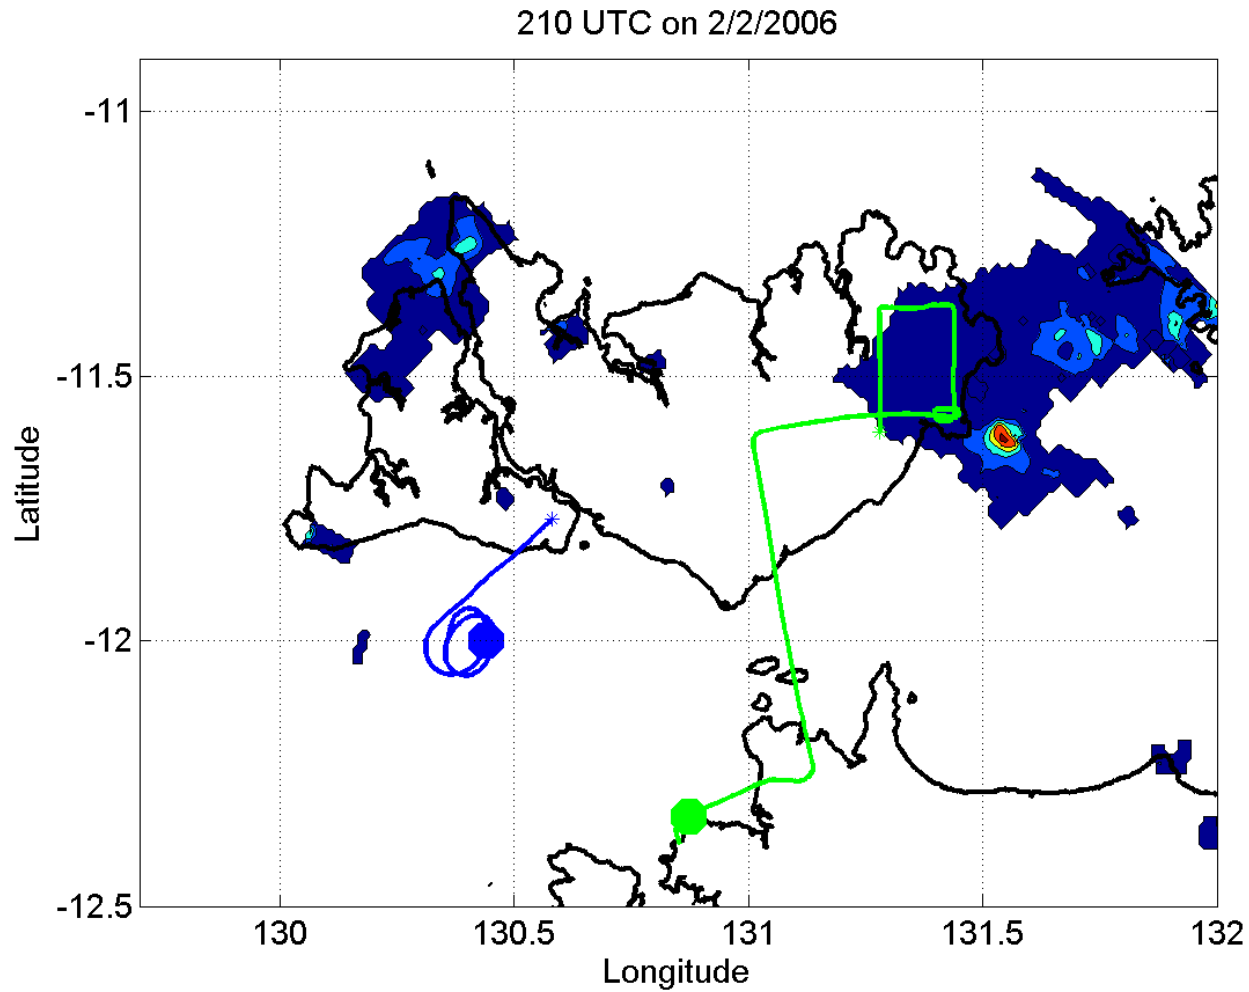

Monsoon

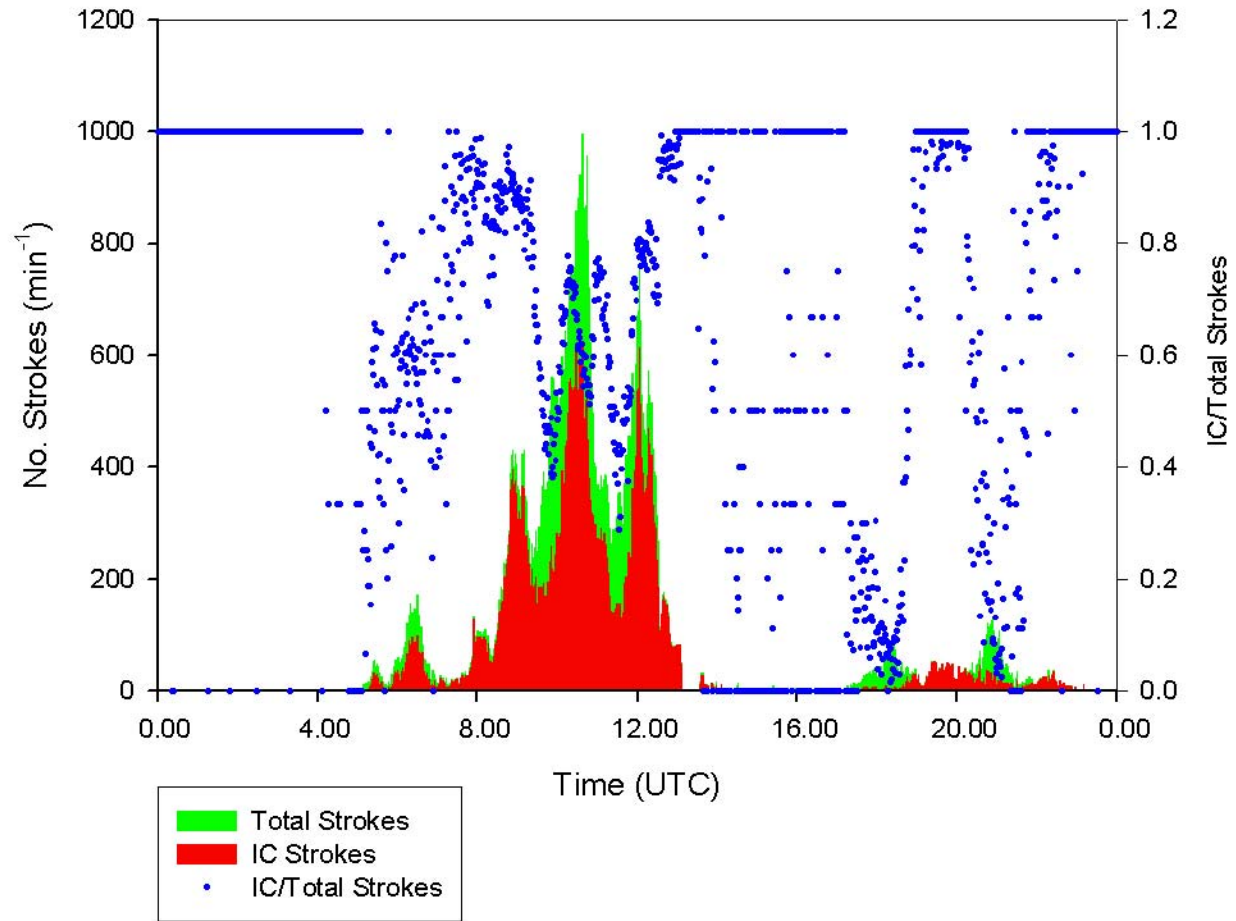

Break
"Hector"

Break season storms had day to day increase in intensity in terms of storm heights
Lightning. Contrast the Hector with the monsoon convection – almost no lightning

LINET Stroke History, 10 Feb 06, Darwin

LINET - 10 Feb 06 - TWP-ICE
